## Piper Strut Thread (Typical and Maximum Number of Threads)

*As permitted for rigging*

Per the Super Cub Owner's manual, to obtain correct dihedral: "...the correct dihedral will be obtained when about seven threads on the lift strut adjustment forks are exposed. (A maximum extension of threads is permissible.)"

**7 threads exposed (approx.) when rigged correctly.**

**15 threads exposed for maximum permissible extension.**

**This information is applicable for J-3, J-4, J-5 and PA-11 through PA-22.**
